BACKGROUND

The Village obtains tree supply and planting services through the Suburban Tree Consortium (STC), which currently has 37 municipal members. Downers Grove has been active in this group since 1987. The STC provides members with a consistent supply of quality trees of the species and varieties requested for the municipal parkways in an efficient and cost effective manner by maintaining contracts with several northern Illinois nurseries. Members have two options for selecting tree supply: 1) Members can place tree orders up to five years in advance at fixed prices, ensuring that the variety of trees they desire are available for a given year; or 2) Members can purchase trees in the current year at fixed prices, allowing for annual adjustment depending on need and availability. For each of the next five years, members have advance ordered over 1,500 trees. Then with each planting season, members add to their orders depending on their planting requirements. Collectively, STC members annually purchase over 6,000 trees.

More than 400 trees are planned to be planted this coming spring and fall. All locations are replacement plantings at residential addresses where trees were lost due to storms, disease, decline or death. These replacement tree plantings will contribute to the health and maintenance of the urban forest tree. Any tree planting locations that will require staff care such as watering will continue to be delayed until a later time. Forestry staff will continue to honor resident requests for specific tree species when practical.

The STC requires that municipalities present a resolution annually. Included in the resolution to continue with the STC is a list of trees that Forestry staff has advance-ordered for Downers Grove. The order includes trees that are more difficult to obtain, as well as those species that are typically requested by residents. The advance-ordering process has allowed staff to secure and obtain interesting trees such as miyabe maple and various new hybrid elms that are more resistant to Dutch elm disease. The advance order is a conservative quantity to ensure flexibility and the ability to add trees with each planting season subject to need.
