IV. PROPOSER'S RESPONSE TO RFP (Professional Services)

(Proposer must insert response to RFP here. DO NOT insert a form contract, the RFP document including detail specs and Proposer's response will become the contract with the Village.)

Project Understanding

Hancock Engineering is pleased to submit our qualifications and proposal for providing professional engineering and surveying services to the Village of Downers Grove for the **2019 Watermain Survey Phase II** project. We have enjoyed getting to know you and your staff through the recent construction Improvements and would like to continue furthering our relationship.

We have provided engineering services (including survey, design, and construction inspection) to many municipalities for projects similar to what will be required at these sixteen locations. Our team is very familiar with the type of information that will need to be obtained while in the field due to the scope of the improvements.

Project Team

Chris Baker, P.E. will be assigned as the Project Manager for this project.

Chris has overseen the acquisition of topographic data for many miles of utility improvements within the recent past. Chris also has abundant experience serving as crew chief, physically obtaining the information for topographic surveys.

Within the last four years, Chris has overseen the data acquisition process for approximately fifteen (15) watermain replacement projects including the following:

- Village Watermain Improvements, Village of Brookfield
- Grand Boulevard Reconstruction, Village of Brookfield
- Cornell Avenue Reconstruction, Village of Melrose Park
- Elm Street Reconstruction, Village of River Grove
- Canfield Avenue Reconstruction, Village of Norridge
- Village-Wide Roadway Improvements, Village of River Grove

With Chris's leadership, the topographic information was obtained efficiently for each of these projects, but was done thorough enough to reduce and eliminate any subsequent field visits.

A benefit of Hancock Engineering is our unique ability to allow many of our engineers to serve as Design Engineers during the winter months and Construction Engineers during construction season. Chris has benefitted greatly from this practice, continuing to become one of our stronger designers as well. The experience gained designing projects of over \$25 Million (including an APWA Project of the Year winner in 2012) the past five years, has allowed Chris a unique vantage point when completing his field obligations. He quickly thinks on his feet and is able to eliminate problems before they force the Contractor to experience "down-time."

PROJECT PROPOSAL

Chris has performed the Design Engineering services for over 50 projects varying in size, including the following projects with watermain improvements:

- Grand Boulevard Reconstruction, Village of Brookfield
- Washington Boulevard, Village of Brookfield
- Elm Street Improvements STP, Village of River Grove
- Canfield Avenue Improvements STP, Village of Norridge
- Grand Avenue ITEP, Village of River Grove

The experience serving as design engineer allows Chris to thoroughly understand what must be obtained during the topographic survey to allow the Village's designers to efficiently perform their duties, ultimately saving the designer time and money.

Eric Windsor will be assigned as a Lead Surveyor for this project. Eric has 18 years of experience and has developed a very impressive resume of completing topographic surveys within the last few years. In 2017 alone, Eric was involved in the data collection for over a dozen utility improvement projects, including:

- Braga Drive Improvements, Broadview (\$6.4M)
- Village-Wide Alley Improvements, Oak Park (\$2.9M)
- LaGrange Road Watermain, LaGrange Park (\$600,000)
- Ogden Avenue Watermain, LaGrange Park ((\$800,000)

Eric has complete understanding of GPS acquisition practices and is also well versed in Total-Station topography and GIS.

Project Understanding

We understand that the work will be comprised of completing field surveys and drafting services necessary to accurately depict the existing ground surface features, existing centerline elevations at maximum spacing of 25', and other important features such as, mailboxes, driveway culverts, power poles, trees, etc.

We understand that detailed information must be supplied for all storm and sanitary sewer structures, pipes, culvers, water valves, hydrants, and other utility features.

One foot contours will be obtained by acquiring elevations at back of walk, top of curb, and edge of pavement, every fifty feet (50').
